Haicom HI-305N

Manufacturer : -

Haicom HI-305N is a GPS receiver with Compact Flash type1 / mini-1394 interfaces and built-in active antenna for high sensitivity to tracking signal. Based on the numerix Ultra low power consumption chip set and supports all functions (Single Sat updates in reduced visibility, Superior urban canyon performance, Foliage Lock for weak signal tracking, etc.). HI-305N is well suited to system integration and users who use any kinds of mobile devices, such as, PDA, notebook PC, Tablet PC, etc. It satisfies a wide variety of applications for car navigation, personal navigation or touring devices, tracking and marine navigation purpose. Users can simply plug it into a PDA or other type of handheld PC running with suitable mapping and routing software for navigation.

By connecting different optional connecting cables, HI-305N can be all kinds of wired GPS receiver solutions.

On the side of HI-305N, there is a SD memory slot. User can insert the SD memory card containing the mapping software so that the GPS data and the map data can be accessed simultaneously via the Compact Flash interface from the host device like, PDA, laptop PC, etc.,.

After the proper driver installed, with the SD memory card inserted, as soon as user plug the Compact Flash interface, there will be a folder created from host device.

Beside using it as a complete GPS solution, HI-305N can also be a SD card reader in CF interface. One can store any file into any standard SD memory card and the file can be read or write via the Compact Flash interface.

1. HI-305N as a CompactFlash GPS receiver 2. HI-305N as a SD Card via
